## **REVISION HISTORY**

The revision history for this test report is shown in table.

| Revision No. | Date of Issue | Description                                  |  |  |
|--------------|---------------|--|--|--|
| 0            | July 05, 2019 | Initial Release                              |  |  |
| 1            | July 29, 2019 | We retested the OBW and corrected the typos. |  |  |

This report only responds to the tested sample and may not be reproduced, except in full, without written approval of the HCT Co., Ltd.

# **Engineering Statement:**

The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them HCT CO., LTD.

Certifies that no party to this application has subject to a denial of Federal benefits that includes FCC benefits pursuant to section 5301 of the Anti-Drug Abuse Act of 1998,21 U.S. C.853(a)

## 2. TEST METHODOLOGY

The measurement procedure described in the American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices (ANSI C63.10-2013) Operating Under §95(m)" were used in the measurement.

## 2.1 EUT CONFIGURATION

The EUT configuration for testing is installed on EIRP measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

#### 2.2 EUT EXERCISE

The EUT was operated in the engineering mode to fix the Tx Frequency that was for the purpose of the measurements.

#### 2.3 GENERAL TEST PROCEDURES

## **Radiated Emissions**

The EUT is placed on a turn table, which is 0.8 m above ground plane below 1 GHz. Above 1 GHz with 1.5 m using absorbers between the EUT and receive antenna. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set far-field distance away from the receiving antenna, which varied from 1 m to 4 m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter (EUT) was rotated through three orthogonal axes according to the requirements in Section 8 of ANSI C63.10. (Version: 2013)

F-TP22-03 (Rev. 01) Page 6 of 35

# 2.4 DESCRIPTION OF TEST MODES

The EUT has been tested under operating condition. Test program used to control the EUT for staying in continuous transmitting and receiving mode is programmed.

F-TP22-03 (Rev. 01) Page 7 of 35

## 3. INSTRUMENT CALIBRATION

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturer's recommendations for utilizing calibration equipment's, which is traceable to recognized national standards.

Especially, all antenna(Up to 40 GHz) for measurement is calibrated in accordance with the requirements of C63.5 (Version : 2006).

## 4. FACILITIES AND ACCREDITATIONS

#### 4.1 FACILITIES

The SAC(Semi-Anechoic Chamber) and conducted measurement facility used to collect the radiated data are located at the 74, Seoicheon-ro 578beon-gil, Majang-myeon, Icheon-si, Gyeonggi-do, Korea. The site is constructed in conformance with the requirements of ANSI C63.4. (Version :2014) and CISPR Publication 22. Detailed description of test facility was submitted to the Commission and accepted dated April 02, 2018 (Registration Number: KR0032)

## 4.2 EQUIPMENT

Radiated emissions are measured with one or more of the following types of Linearly polarized antennas: tuned dipole, bi-conical, log periodic, bi-log, and/or ridged waveguide, horn. Spectrum analyzers with preselectors and quasi-peak detectors are used to perform radiated measurements.

Conducted emissions are measured with Line Impedance Stabilization Networks and EMI Test Receivers. Calibrated wideband preamplifiers, coaxial cables, and coaxial attenuators are also used for making measurements.

All receiving equipment conforms to CISPR Publication 16-1, "Radio Interference Measuring Apparatus and Measurement Methods."

F-TP22-03 (Rev. 01) Page 8 of 35

# 5. MEASUREMENT UNCERTAINTY

The measurement uncertainties shown below were calculated in accordance with the requirements of ANSI C63.4:2014.

All measurement uncertainty values are shown with a coverage factor of k = 2 to indicate a 95 % level of confidence.

| Parameter                              | Expanded Uncertainty (± dB) |
|--|-----------------------------|
| Radiated Disturbance (9 kHz ~ 30 MHz)  | 3.40                        |
| Radiated Disturbance (30 Mb ~ 1 6b)    | 4.80                        |
| Radiated Disturbance (1 础 ~ 18 础)      | 5.70                        |
| Radiated Disturbance (18 GHz ~ 40 GHz) | 5.05                        |
| Radiated Disturbance (40 砒 ~ 243 砒)    | 4.59                        |

F-TP22-03 (Rev. 01) Page 10 of 35

- All tests is performed by radiated measurement and applied below conditions.
- : Used measurement distance with far field of test such as EIRP, OBW and Band edge are as follow.

 $Wavelength = Speed \ of \ light \ / \ Measurement \ frequency = 30 \ / \ 7 \ 700 = 0.0038$   $(2 \ X \ (Max \ antenna \ length \ of \ EUT)^2) \ / \ Wavelength = (2 \ X \ 0.047886)^2 \ / \ 0.0038 = 1.17 \ m$ 

: Spurious emissions measurement distance is shown in table below. (Far field)

| Frequency Rage (GHz) | Wavelength (cm) | Far Field Distance (m) | Measured Distance (m) |
|----------------------|-----------------|------------------------|-----------------------|
| 18 ~ 40              | 0.75            | 0.61                   | 1.0                   |
| 40 ~ 60              | 0.50            | 0.92                   | 1.0                   |
| 60 ~90               | 0.33            | 1.37                   | 1.5                   |
| 90 ~ 140             | 0.21            | 2.14                   | 2.5                   |
| 140 ~ 220            | 0.13            | 3.36                   | 3.5                   |
| 220 ~ 243            | 0.12            | 3.71                   | 4.0                   |

F-TP22-03 (Rev. 01) Page 11 of 35

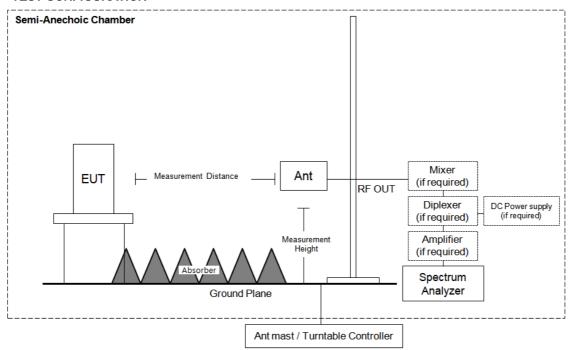

## 7. TEST RESULT

## 7.1 OCCUPIED BANDWIDTH MEASUREMENT

# Test Requirements and limit, §2.1049

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured.

## **■ TEST CONFIGURATION**

## **■ TEST PROCEDURE**

The transmitter output is connected to the Spectrum Analyzer.

RBW = 1% to 3% of the 99% bandwidth.

VBW ≥ 3 x RBW

Detector = Peak

Trace mode = max hold

Sweep = auto couple

Allow the trace to stabilize

Note: 1. We tested Occupied Bandwidth using the automatic bandwidth measurement capability of a spectrum analyzer.

## 7.2 Radiated Power

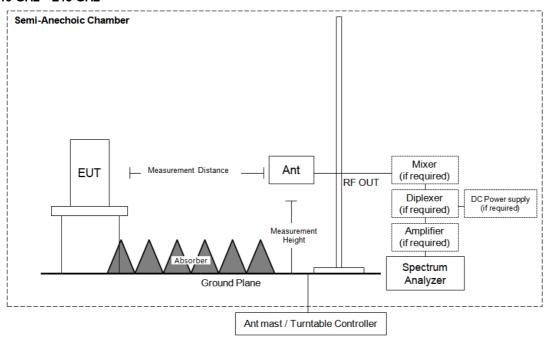

## Test Requirements and limit, §95.3367

The fundamental radiated emission limits within the 76-81 GHz band are expressed in terms of Equivalent Isotropically Radiated Power (EIRP) and are as follows:

- (a) The maximum power (EIRP) within the 76-81 GHz band shall not exceed 50 dBm based on measurements employing a power averaging detector with a 1 MHz Resolution Bandwidth (RBW).
- (b) The maximum peak power (EIRP) within the 76-81 GHz band shall not exceed 55 dBm based on measurements employing a peak detector with a 1 MHz RBW.

#### 7.3 Unwanted emissions

#### Test Requirements and limit, §95.3379

The power density of any emissions outside the 76-81 GHz band shall consist solely of spurious emissions and shall not exceed the following:

(1) Radiated emissions below 40 GHz shall not exceed the field strength as shown in the following emissions table.

| Frequency<br>(MHz) | Field strength (microvolts/meter) | Measurement distance<br>(meter) |
|--------------------|-----------------------------------|---------------------------------|
| 0.009 ~ 0.490      | 2400/F(kHz)                       | 300                             |
| 0.490 ~ 1.705      | 24000/F(kHz)                      | 30                              |
| 1.705 ~ 30.0       | 30                                | 30                              |
| 30 ~ 88            | 100                               | 3                               |
| 88 ~ 216           | 150                               | 3                               |
| 216 ~ 960          | 200                               | 3                               |
| Above 960          | 500                               | 3                               |

- (i) In the emissions table in paragraph (a)(1) of this section, the tighter limit applies at the band edges.
- (ii) The limits in the table in paragraph (a)(1) of this section are based on the frequency of the unwanted emissions and not the fundamental frequency. However, the level of any unwanted emissions shall not exceed the level of the fundamental frequency.
- (iii) The emissions limits shown in the table in paragraph (a)(1) of this section are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9.0-90.0 kHz, 110.0-490.0 kHz, and above 1000 MHz. Radiated emissions limits in these three bands are based on measurements employing an average detector with a 1 MHz RBW.
- (2) The power density of radiated emissions outside the 76-81 GHz band above 40.0 GHz shall not exceed the following, based on measurements employing an average detector with a 1 MHz RBW:
- (i) For radiated emissions outside the 76-81 GHz band between 40 GHz and 200 GHz from field disturbance sensors and radar systems operating in the 76-81 GHz band: 600 pW/cm² at a distance of 3 meters from the exterior surface of the radiating structure.
- (ii) For radiated emissions above 200 GHz from field disturbance sensors and radar systems operating in the 76-81 GHz band: 1000 pW/cm<sup>2</sup> at a distance of 3 meters from the exterior surface of the radiating structure.
- (3) For field disturbance sensors and radar systems operating in the 76-81 GHz band, the spectrum shall be investigated up to 231.0 GHz.

#### **Test Procedure**

- 1. The EUT is placed on a turntable, which is 1.5 m above ground plane.
- 2. The turntable shall be rotated for 360 degrees to determine the position of maximum emission level.

F-TP22-03 (Rev. 01) Page 19 of 35

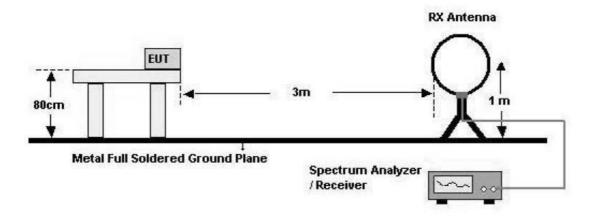

- 3. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 4. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 5. Repeat above procedures until the measurements for all frequencies are complete.

## **■ TEST RESULTS**

#### 9 kHz - 30MHz

Operation Mode: Continuous TX Mode\_Short Distance Device

| Frequency               | Reading | Ant. factor | Cable loss | Ant. POL | Total  | Limit  | Margin |  |
|-------------------------|---------|-------------|------------|----------|--------|--------|--------|--|
| MHz                     | dBuV/m  | dBm/m       | dBm        | (H/V)    | dBuV/m | dBuV/m | dB     |  |
| No Critical peaks found |         |             |            |          |        |        |        |  |

Operation Mode: Continuous TX Mode\_Long Distance Device

| Frequency               | ency Reading Ant. factor |       | Cable loss | Ant. POL | Total  | Limit  | Margin |  |
|-------------------------|--------------------------|-------|------------|----------|--------|--------|--------|--|
| MHz                     | dBuV/m                   | dBm/m | dBm        | (H/V)    | dBuV/m | dBuV/m | dB     |  |
| No Critical peaks found |                          |       |            |          |        |        |        |  |

## Notes:

- 1. Measuring frequencies from 9 kHz to the 30MHz.
- 2. The reading of emissions are attenuated more than 20 dB below the permissible limits or the field strength is too small to be measured.
- 3. Distance extrapolation factor = 40 log (specific distance / test distance) (dB)
- 4. Limit line = specific Limits (dBuV) + Distance extrapolation factor
- 5. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.
- 6. The test results for below 30 MHz is correlated to an open site.

The result on OFTS is about 2 dB higher than semi-anechoic chamber(10 m chamber)

C·L: CABLE LOSS

AMP G: AMPLIFIER GAIN

# Notes:

1. Measuring frequencies from 1 GHz to the 10th harmonic of highest fundamental frequency.

- 2. Measurements above show only up to 6 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.
- Radiated emissions measured in frequency above 1000MHz were made with an instrument using Peak detector mode and average detector mode of the emission shown in Actual FS column.
- 4. Total = Reading Value + Antenna Factor + Cable Loss Amplifier Gain + Distance Factor
- 5. We have done x, y, z planes in EUT and horizontal and vertical polarization in detecting antenna.

## 7.4 Fundamental emissions (Frequency Stability)

# §95.3379 76 ~ 81 GHz Band Radar Service unwanted emissions limits.

(b) Fundamental emissions must be contained within the frequency bands specified in this section during all conditions of operation. Equipment is presumed to operate over the temperature range −20 to +50 degrees Celsius with an input voltage variation of 85% to 115% of rated input voltage, unless justification is presented to demonstrate otherwise.

## **■ TEST PROCEDURE**

The transmitter output is connected to the Spectrum Analyzer.

RBW = 1% to 3% of the 99% bandwidth.

VBW ≥ 3 x RBW

Detector = Peak

Trace mode = max hold

Sweep = auto couple

Allow the trace to stabilize

The frequency drift was investigated for every 10 °C increment until the unit is stabilized then recorded the reading in tabular format with the temperature range of -40 to 85 °C.(Manufacturer declaration)

Voltage supplied to EUT is 12 V reference temperature was done at 20°C.

The voltage was varied by ± 15 % of nominal

| Manufacturer    | Model / Equipment                         | Calibration<br>Date | Calibration<br>Interval | Serial No.       |
|-----------------|---|---------------------|-------------------------|------------------|
| Schwarzbeck     | BBHA 9170 / Horn Antenna                  | 12/04/2017          | Biennial                | BBHA9170541      |
| Innco system    | CO3000 / Controller(Antenna mast)         | N/A                 | N/A                     | CO3000-4p        |
| Innco system    | MA4640/800-XP-EP / Antenna Position Tower | N/A                 | N/A                     | N/A              |
| Rohde&Schwarz   | FSW / Spectrum Analyzer                   | 09/27/2018          | Annual                  | 101256           |
| Rohde&Schwarz   | FSP / Spectrum Analyzer                   | 09/19/2018          | Annual                  | 836650/016       |
| Emco            | 2090 / Controller                         | N/A                 | N/A                     | 060520           |
| Ets             | Turn Table                                | N/A                 | N/A                     | N/A              |
| Rohde & Schwarz | Loop Antenna                              | 01/18/2019          | Biennial                | 1513-175         |
| Schwarzbeck     | VULB 9168 / Hybrid Antenna                | 08/31/2018          | Biennial                | 9168-0895        |
| Schwarzbeck     | BBHA 9120D / Horn Antenna                 | 10/04/2017          | Biennial                | 9120D-1298       |
| OML INC.        | WR-19 Horn Antenna / Horn Antenna         | 04/23/2018          | Biennial                | 18042301         |
| OML INC.        | WR-19 Horn Antenna / Horn Antenna         | 04/23/2018          | Biennial                | 18042302         |
| OML INC.        | WR-12 Horn Antenna / Horn Antenna         | 04/23/2018          | Biennial                | 18042301         |
| OML INC.        | WR-12 Horn Antenna / Horn Antenna         | 04/23/2018          | Biennial                | 18042302         |
| OML INC.        | WR-08 Horn Antenna / Horn Antenna         | 05/01/2018          | Biennial                | 18050101         |
| OML INC.        | WR-08 Horn Antenna / Horn Antenna         | 05/01/2018          | Biennial                | 18050102         |
| OML INC.        | WR-05 Horn Antenna / Horn Antenna         | 05/01/2018          | Biennial                | 18050101         |
| OML INC.        | WR-05 Horn Antenna / Horn Antenna         | 05/01/2018          | Biennial                | 18050102         |
| OML INC.        | WR-03 Horn Antenna / Horn Antenna         | 04/23/2018          | Biennial                | 18042301         |
| OML INC.        | WR-03 Horn Antenna / Horn Antenna         | 04/23/2018          | Biennial                | 18042302         |
| OML INC.        | OML WR19 / Harmonic Mixer                 | 09/27/2018          | Annual                  | W19HWD           |
| OML INC.        | OML WR12 / Harmonic Mixer                 | 09/27/2018          | Annual                  | W12HWD           |
| OML INC.        | OML WR08 / Harmonic Mixer                 | 09/27/2018          | Annual                  | W08HWD           |
| OML INC.        | OML WR05 / Harmonic Mixer                 | 07/11/2018          | Annual                  | M05HWD           |
| OML INC.        | OML WR03 / Harmonic Mixer                 | 07/11/2018          | Annual                  | M03HWD           |
| OML INC.        | WR-19 / Source Module                     | 09/27/2018          | Annual                  | S19MS-A-160516-1 |
| OML INC.        | WR-12 / Source Module                     | 09/27/2018          | Annual                  | S12MS-A-160419-1 |
| OML INC.        | WR-08 / Source Module                     | 09/27/2018          | Annual                  | S08MS-A-160419-1 |
| OML INC.        | WR-05 / Source Module                     | 07/11/2018          | Annual                  | S05MS-A-160419-1 |
| OML INC.        | WR-03 / Source Module                     | 07/11/2018          | Annual                  | S03MS-A-160419-1 |
| OML INC.        | Diplexer L.O / Diplexer                   | 07/24/2018          | Annual                  | DPL518-160419-1  |
| CERNEX          | CBLU1183540 / Power Amplifier             | 07/10/2018          | Annual                  | 22964            |
| CERNEX          | CBL26405040 / Power Amplifier             | 06/18/2019          | Annual                  | 25956            |

# Note:

- 1. Equipment listed above that calibrated during the testing period was set for test after the calibration.
- 2. Equipment listed above that has a calibration due date during the testing period, the testing is completed before equipment expiration date.
